COMPILED BY MARK PIEPKORN

For the international issue of GreenSource, we've chosen some of our favorite GreenSpec products developed in places other than the U.S.

WES5 Tulipo Wind Turbine

WES Canada, in partnership with manufacturer WES Netherlands, offers the Tulipo—a 2.5 kilowatt, grid-connected wind-powered generator designed with in-town facilities in mind: schools, gas stations, supermarkets, and the like. It's an urban turbine. The specially designed blades and low operating speed contribute to the quieter-than-normal operation of this uniquely designed turbine, which starts turning at a minimum wind speed of 3 meters per second—0.1 miles per hour. WES Canada will package the Tulipo in batches of five for corporate customers. Larger 80- and 250-kilowatt commercial turbines are also available.
