

Forbo Natural Linoleum

Natural linoleum is a durable, low-maintenance, time-proven flooring made from linseed oil, pine rosin, sawdust, cork dust, limestone, natural pigments, and a jute backing... all

minimally processed and commonly available materials. Originally formed in 1928 as a consortium of German, Swedish, and Swiss linoleum manufacturers, Forbo is the largest producer of linoleum in the world, meeting the stringent criteria for the Netherlands Environmental Quality Mark and the Nordic Swan Label. Forbo linoleum is available in sheet and tile in a range of colors and styles for hospitals, schools, offices, retail, and residential applications. There's more to composition flooring than vinyl. **Forbo Linoleum, Inc., Hazleton, PA. Phone 570-459-0771, toll-free 800-842-7839; www.forboflooringNA.com CIRCLE 85**

Ecopower MicroCHP

More than two thousand Ecopower MicroCHP units have been installed in Europe over the past five years, and now they're available in North America from Marathon Engine Systems. CHP—combined heat and power—co-generates heating and electricity, and this unit does it quietly and cleanly with natural gas or propane for residential or light commercial applications. Larger facilities can be served with multiple installations. More than 90 percent of the energy generated as heat and electricity is used. This system is best suited to buildings with hydronic heating, but it can be adapted to other types of heating. **Marathon Engine Systems, East Troy, WI.
