

Store Your Water with Confidence

XERXES®

CORPORATION

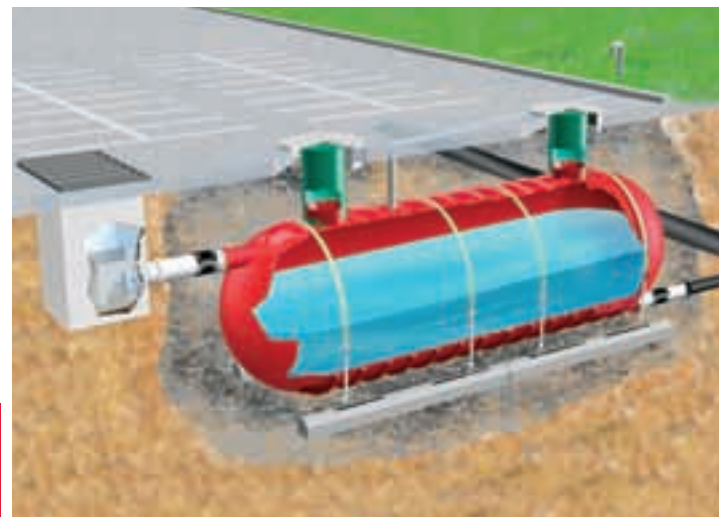

a subsidiary of ZCL Composites Inc.

Water is valuable. Xerxes can help you store it wisely while also earning LEED design points with cost-effective fiberglass underground tanks. For more than 30 years, Xerxes has been supplying the petroleum industry with high-quality tanks for a wide variety of fuel storage needs. Today, Xerxes fiberglass tanks are routinely incorporated into building designs that qualify for available LEED credits. Some of today's most innovative Green Building projects recognize that water storage is a key element in maximizing water conservation design possibilities.

Rainwater Harvesting · Stormwater Retention · Water Efficient Landscaping Irrigation · Greywater Recycling

Why choose a fiberglass tank for water storage applications?

- **Storage capacity from 600 to 62,000 gallons** - dependable, one-piece factory manufactured tanks versus field assembled products
- **Rust-proof, long-lasting fiberglass** - constructed of non-corrosive material, extending the life of the product
- **H-20 load rated** - tanks can be placed under parking lots or parking garages when working with a small footprint
- **Lightweight, easy to install** - generally set and backfilled in one day, reducing construction time
- **Cost-effective** - available from six manufacturing facilities in North America
- **Dependable** - unlike some retention systems that utilize liners that are prone to lead
