

# NATURAL ALLIES

© 2009 Knauf Insulation GmbH.

I'm always on the lookout for new, more sustainable ways to design and build. That's why I specify EcoBatt® Insulation from Knauf for my projects.

Knauf EcoBatt Glasswool gives me the same optimal performance as all their insulation, but it's more sustainable...thanks to its abundant and renewable raw materials, high post-consumer recycled content and ECOSE® Technology.

Knauf's revolutionary new ECOSE Technology is a binder with a lower embodied energy. It is based on rapidly renewable bio-based materials—eliminating the non-renewable petroleum-based chemicals such as phenol, formaldehyde and acrylics found in traditional fiber glass insulation.

With my focus on sustainable building, EcoBatt Insulation is the natural fit for my projects.
