Beautiful, versatile, sustainable western red cedar

Western Red Cedar offers unique, natural performance characteristics and exceptional beauty that bring warmth, character and longevity to the interior and exterior of residential and commercial projects around the world. Whether you choose knotty or clear grades, Western Red Cedar offers virtually unlimited versatility and design flexibility in terms of size and profile.

Western Red Cedar is a truly sustainable building material. It has the lowest environmental impact when compared with other materials such as brick and fibre cement. Independently certified, it is harvested legally and sustainably from managed forests in British Columbia.

The Western Red Cedar Lumber Association offers its architect advisory service to assist you in selecting and sourcing the right product for your next project. For more information, please visit our website or call 1 866 778 9096.
